

FRES-4848

Square Dakota Stone™ Fire Pit

MEREMEC

All sizes in this document are approximate.

Dakota Stone™

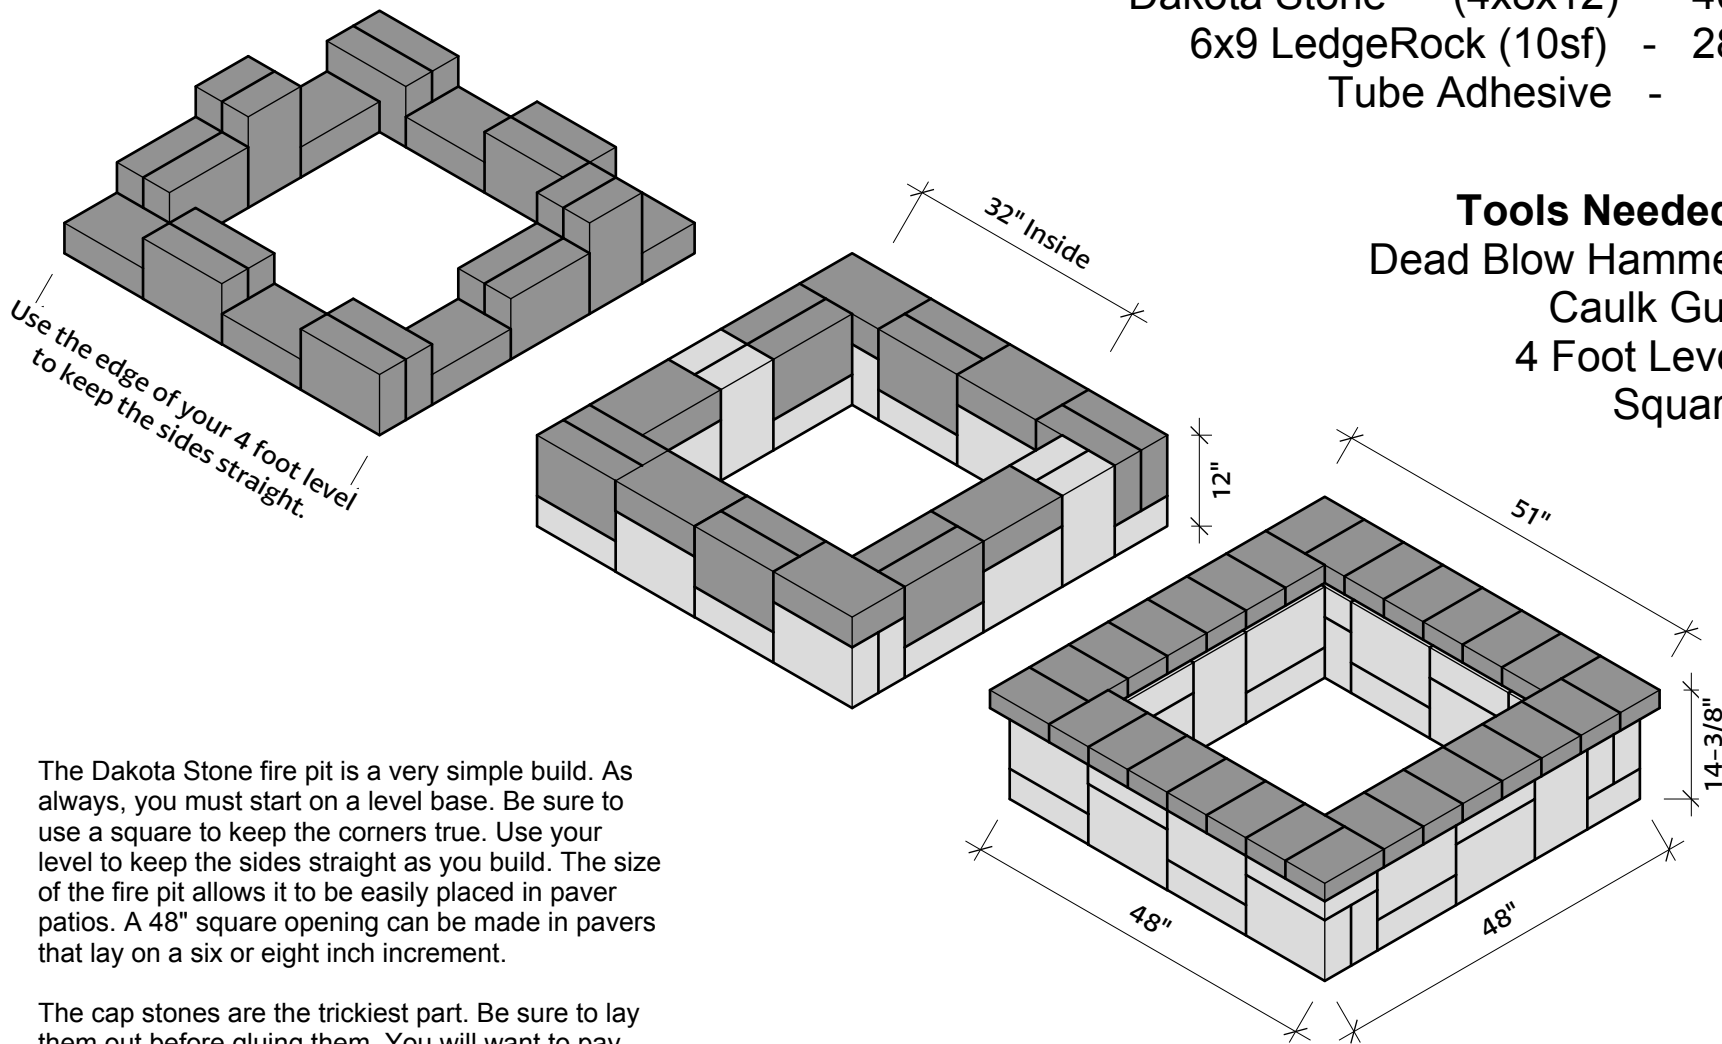

Step by step instructions for assembling FRES-4848 on a prepared surface/base.

**BUILD WITH
DAKOTA**

This project requires:
 Dakota Stone™ (4x8x12) - 40
 6x9 LedgeRock (10sf) - 28
 Tube Adhesive - 1

Tools Needed:
 Dead Blow Hammer
 Caulk Gun
 4 Foot Level
 Square

When constructing your project, be sure to keep all blocks level, square, and plumb. Use a four foot level and check often. Starting on a level foundation is key. When gluing blocks together, be sure not to use too much adhesive - this will cause the blocks to "swim." A small bead is ideal.

The Dakota Stone fire pit is a very simple build. As always, you must start on a level base. Be sure to use a square to keep the corners true. Use your level to keep the sides straight as you build. The size of the fire pit allows it to be easily placed in paver patios. A 48" square opening can be made in pavers that lay on a six or eight inch increment.

The cap stones are the trickiest part. Be sure to lay them out before gluing them. You will want to pay extra attention when installing the cap. Be sure to keep the sides straight, and the corners square.

All sizes in this document are approximate.
