### Fire Pit Pallet: 1,275 lbs

Each pallet contains all of the 6" tall, 3" tall, and cap pieces needed to create the fire pit shown below. The fire pit can be ordered with a black steel ring (shown), a galvanized ring.

### FEATURES

- **Beautiful Natural stone texture.**
- Larger, **distinguished** scale.
- **One Pallet** has all of the stones, the caps, and the steel ring.
- Dimensional = **fast installation and no waste.**
- Multiple **natural color blends** available.
- **Integrates seamlessly** with all Rosetta products.

CROSS-SECTION

### Instructions

1. Familiarize yourself with the construction details shown on this page.
2. Mark out the location for your fire pit. Note dimensions shown are nominal so mark an area slightly larger than shown.
3. Excavate for drain stone base (approx. 6")
4. Fill excavated area with drain stone, level, and compact. The finished height of the fire pit will be approximately 14.25" above base.
5. Place and center steel ring on prepared base.
6. Place 3" and 6" high blocks per the pattern shown below. Keep the back of the blocks approximately 2" off of the steel ring.
7. After placing blocks around the ring, adjust the blocks in or out to make the circle close and fit tight. If the blocks do not close the circle, move all blocks slightly in. If the blocks seem too long, move the blocks slightly out.
8. Fill gap between ring and blocks with small washed stone (p-gravel). This step will hold the ring in the center of the fire pit.
9. Place caps in circle around fire pit. Adjust the caps in or out to make them fit tightly together. Caps should slightly overhang the front of the blocks and be slightly forward of the outside edge of the steel ring.
10. Enjoy!

### SAMPLE BLOCK LAYOUT PATTERN (OPTIONAL)
